'DESCR': ".. _digits_dataset:\n\nOptical recognition of handwritten digits dataset\n--------\n\n**Data Set Characteristics:**\n\n :Attribute Information: 8 :Number of Instances: 1797\n :Number of Attributes: 64\n x8 image of integer pixels in the range 0..16.\n :Missing Attribute Values: None\n :Creator: E. Alpaydin (alpaydin '@' boun.edu.tr)\n :Date: July; 1998\n\nThis is a cop y of the test set of the UCI ML hand-written digits datasets\nhttps://archive.ics.uci.ed u/ml/datasets/Optical+Recognition+of+Handwritten+Digits\n\nThe data set contains images of hand-written digits: 10 classes where\neach class refers to a digit.\n\nPreprocessing programs made available by NIST were used to extract\nnormalized bitmaps of handwritten digits from a preprinted form. From a\ntotal of 43 people, 30 contributed to the trainin g set and different 13\nto the test set. 32x32 bitmaps are divided into nonoverlapping b locks of\n4x4 and the number of on pixels are counted in each block. This generates\nan input matrix of 8x8 where each element is an integer in the range\n0..16. This reduces d imensionality and gives invariance to small\ndistortions.\n\nFor info on NIST preprocess ing routines, see M. D. Garris, J. L. Blue, G.\nT. Candela, D. L. Dimmick, J. Geist, P. J. Grother, S. A. Janet, and C.\nL. Wilson, NIST Form-Based Handprint Recognition Syste m, NISTIR 5469,\n1994.\n\n.. topic:: References\n\n - C. Kaynak (1995) Methods of Combi ning Multiple Classifiers and Their\n Applications to Handwritten Digit Recognition, MSc Thesis, Institute of\n Graduate Studies in Science and Engineering, Bogazici Univ ersity.\n - E.
